Green from the ground up, the Brower Center is a powerful model of sustainable, mixed-use development. Utilizing the latest in energy-saving technologies and recycled building materials, the Center will make as light a footprint on the Earth as possible, taking into account the true life-cycle cost of building construction, operation, and maintenance.

Additionally, the Brower Center will set specific targets and benchmarks for environmental efficiency during its operation, and is expected to attain a LEED Platinum rating. The tour will be followed by a presentation by Peter Rumsey, P.E. of Rumsey Engineering, the lead mechanical design firm on the Brower Center design team.
