\$10 AEE members
\$15 for non members

REGISTER by Oct 15:

Joseph Ols
joseph@olscontrols.com

A behind the scenes look at Solyndra's solar manufacturing plant, world headquarters, and 1.2MW solar array. Solyndra's unique thin film solar technology create solar tubes that absorb 360 degrees of light instead of the traditional flat crystalline panel for "the lowest cost and the fastest & easiest to install solar system".

Solyndra is giving AEE a limited attendance guided tour of their LEED Gold factory walk the floor, plus close up of the roof top Power Plant installation.

Refreshments & light food provided.
